Ford CAD and Team Center Access

Booth Consulting Services (BCS) specializes in helping small- to mid-size Ford suppliers get directly connected to Ford Team Center (TCE). We start with a free analysis to give you a quick, up-front look at what the costs and implementation will look like.

We will then provide you with a free estimate on what the total cost will be (including BCS services, required Ford applications, etc.) and a detailed implementation plan that shows each step and the timing.

Once you make a decision to implement a direct connection to Ford, BCS can handle the implementation from beginning to end, including installation, set-up and training.

Ford CAD and Team Center Access

Post-implementation, there will be multiple patches and semi-annual or annual release updates from Ford. BCS will keep you informed of these and will provide you with a cost estimate to implement them on your systems.

There are also non-direct connection options available, including using your own core CAD system; and BCS can help you understand the Ford requirements and what your full range of options is.

BCS understands the cost pressures that small- to mid-size suppliers are under, and we offer reasonable rates and do not require long-term commitments, giving you both the services you need and the flexibility you require.

OEM CAD Implementations:

Booth Consulting Services (BCS) has extensive experience in all the OEMs' CAD systems, including GM, Chrysler, Toyota and Nissan. These include Team Center, UG-NX, Catia V5/V6 and Catia PLM systems. Covering both CAD systems and direct connections to the OEM, we start with a free analysis to give you a quick, up-front look at what the costs and implementation will look like.

We will then provide you with a free estimate on what the total cost will be (including BCS services, required applications, etc.) and a detailed implementation plan that shows each step and the timing.

Once you make a decision to implement an OEM CAD/PLM system, BCS can handle the implementation from beginning to end, including installation, set-up and training.

Personal and Small Business Support & Consulting:

- At the very core of BCS is our support for small business. We understand you because we are a small business like you.

- We specialize in helping small businesses with basic IT needs, from PC/Wireless and remote device support, to implementation of core applications such as Accounting, Point of Sale, Credit Card Processing and other applications so critical to small business today.

- Free estimates and reasonable rates. Although we do have a $125 minimum on services, you will find our rates fully competitive with other options; but we offer a service level that will exceed your expectations.
